Moreover, more intense fear, conceptualized as a higher perceived probability of NStim, will make relative relief more likely. Active relief, on the other hand, can be studied in operant settings where participants learn to avoid negativity through engaging in specific behaviors.

Hoboken, NJ: Wiley. A total of students at a women's university in Japan participated. That is, prevention relief corresponds to a reduction or stopping of fear of US aversive cf. Also, the dogs trained behavior instrumental to avoid shock.

Journal of Applied Psychology, 875—Importantly, some goal theories explicitly suggest that relief derives from avoidance motivation but at the same time deactivates avoidance motivation e. On the other hand, frustration situations have been shown to trigger avoidance behavior in animal studies Papini and Dudley,
